TECHNOLOGY & SERVICE OPERATIONS LEADER

Senior Technical Program Manager | Large-Scale Rollouts & Deployments | M&A IT Integration | Digital Workplace | AI Automation

SUMMARY

I lead the people and the programs that get technology past the vision or pilot stage.

I work in enterprise companies and in startups, moving the needle on rollouts, deployments, and merger and acquisition (M&A) integrations, leading the people who get projects done, and making sure the programs succeed and the products and systems stay supported.

At Walmart Global Tech I led a 45-person, five-team organization on a \$14 million budget. I grew the managed Mac fleet from about 1,000 devices to 37,000. Growth like that usually costs you satisfaction, ticket volume, or spend. All three moved the right way instead. I led nine enterprise M&A technology integrations against fixed business dates.

I am adding robotics and physical artificial intelligence (AI) to what I do, because that is where my research says the technology is heading next. I stay with a program through delivery and closeout, and I am glad to take on wherever the company's vision goes next.

CORE SKILLS

Technical Program Management | Program & Portfolio Management | Digital Workplace | Endpoint Management | Technology & Service Operations | Large-Scale Rollouts & Enterprise Deployment | Hardware Refresh | M&A IT Integration | Requirements, Roadmaps & Integrated Scheduling | Dependency, Risk & Change Management | Budget & Vendor Management | Cross-Functional & People Leadership | AI Automation | Agile · Scrum · Kanban · Predictive/Waterfall | Executive Communication

PROFESSIONAL EXPERIENCE

INDEPENDENT TECHNICAL PROGRAM MANAGER & AI AUTOMATION CONSULTANT

Menlo Park, CA | April 2026 – Present

KYODO PARTNERS | Technical Program & AI Automation Consultant, Part-Time Project | Remote | April 2026 – June 2026

- Supported the founders of a self-funded, fully remote, early-stage real-estate and digital-products venture.
- Translated house-flipping, landlord, and rental-property workflows into requirements for cloud-based calculators, digital products, and automation concepts.
- Helped establish a cloud-first, SaaS-enabled operating stack using Google Workspace, Microsoft 365, Cloudflare Access, DigitalOcean, GitHub, Gumroad, Mercury, and QuickBooks.
- Used AI-assisted tools to create requirements, wireframes, workflow prototypes, and a lightweight program portal; documented the environment and transitioned continuing technical ownership to the venture's technology lead.

TECHNOLOGY PROGRAM MANAGEMENT PORTFOLIO | Independent | Menlo Park, CA | April 2026 – Present

- Built a public Technology Program Management Portfolio of simulated operational scenarios based on hypothetical frameworks, covering merger and acquisition (M&A) IT integration, enterprise hardware refresh, and robotics deployment, with Agile, Scrum, Kanban, Hybrid, and Predictive/Waterfall playbooks, command-center dashboards, program artifacts, and MuJoCo demonstrations. This robotics work is training- and portfolio-based, not paid employment or professional robotics experience.

MERCOR | AI Trainer, IT Management Subject-Matter Expert, Project-Based | Remote | December 2025 – January 2026 and May 2026

- Trained and evaluated large language models on information technology (IT) management scenarios for a confidential research client, contributing as a subject-matter expert across two separate project engagements.
- Authored gold-standard reference responses — the correct expert answer a model is trained toward — covering diagnosis, escalation logic, proposed solutions, and operational feasibility.
- Graded model output against those references and flagged recommendations that would not hold up in a real technology-operations environment. Client identity and training content are covered by a non-disclosure agreement.

WALMART GLOBAL TECH | Senior Manager III, Associate Digital Experience | Sunnyvale, CA | May 2012 – August 2025

End-user computing, service operations, and technology program delivery; people leader and program owner for a five-team portfolio.

- Led Mac@Walmart, scaling the managed environment from approximately 1,000 to 37,000 devices, and supported Modern Management and telemetry strategy affecting approximately 300,000 additional Windows endpoints, sustaining 98% operating system compliance year over year.
- Deployed Infinipoint across roughly 30,000 Macs, reaching about 93% remediation within three days.
- Deployed Microsoft OneDrive and Tanium across the managed Mac fleet, standardizing file sync, collaboration, and endpoint security on macOS.
- Led nine enterprise merger and acquisition (M&A) technology integrations against fixed business dates, coordinating endpoint standards, identity and access, Day 1 onboarding, collaboration and workspace migrations, application rationalization, support, risk, and business continuity. The resulting playbooks supported Walmart's permanent integration team.
- Designed the change control process and phases the Associate Digital Experience organization ran on for endpoint and workplace technology changes.
- Led teams that deployed and supported Mac mini caching servers, iPads, and VR headsets for 200 Walmart Academies.

- Led a 45-person, five-team technology portfolio across endpoint engineering, Level 2 support, call-center support, remote-support tools, and endpoint telemetry. Coached people managers, engineers, product managers, project managers, developers, and data contributors.
- Managed a \$14 million annual portfolio and delivered \$2 million in annual savings, including \$451,000 through the Jamf cloud agreement and \$120,000 through remote-support improvements. Drove approximately \$1.7 million in Log4j cost avoidance.
- Led the vision, roadmap, stakeholder alignment, and delivery approach for Sammy, an AI-enabled self-service and diagnostics experience that cut IT ticket volume by about 40%. Owned the product roadmap and backlog in Aha!
- Used telemetry, support data, HaTS, and NPS feedback to prioritize roadmaps and backlogs. Sustained 96% Mac satisfaction for six years and improved Mac NPS from 70 to 85.
- Led the Level 2 escalation organization, the largest of the five teams, supporting Windows and macOS endpoint technology across Walmart stores, pharmacies, Academies, and distribution centers, including approximately 4,700 pharmacies.
- Authored the endpoint hardware and operating system policies, standards, and guidelines, and served as the designated subject-matter expert to the Security Council. Partnered with Security on endpoint visibility, vulnerability remediation, browser governance, Microsoft Defender, Tanium, Infinipoint, and incident response.

WALMART | Manager, E-Commerce Support Engineering & Help Desk | Sunnyvale, CA | May 2007 – May 2012

- Rebuilt and led a 20-person support-engineering organization and established offshore support coverage in India and China, running follow-the-sun delivery with Cognizant and Bleum.
- Led technology support for employees, executives, engineering teams, and as many as 15,000 customer-service agents during peak periods, plus an e-commerce help desk handling approximately 30,000 accounts annually.
- Led the Remedy-to-ServiceNow pilot and standardized ticketing, inventory, support, and escalation workflows later used in broader enterprise adoption.
- Directed procurement, inventory, shipping, deployment, budgets, and chargebacks for employee technology. Recovered approximately \$400,000 by reducing the Cisco telephone footprint and reselling surplus equipment.
- Created the Walmart eCommerce Management Resource Center (WeMRC), an onboarding framework connecting HR, hiring managers, IT, and Security around equipment, access, and day-one readiness. Served as the WeMRC subject-matter expert on the team that migrated it into Workday when Walmart adopted the platform enterprise-wide.
- Partnered with Security to remediate more than 17,000 Linux vulnerabilities using open-source tools without new software spending.

EARLIER EXPERIENCE

BAE SYSTEMS — Lead Desktop Support Engineer | Aug 2005 – May 2007. Tier 3 Mac, Windows, and Linux support in a defense environment, including executive support, VPN, networking, and conference-room technology.

UCSF MEDICAL CENTER via TEKSYSTEMS — Technical Trainer | Jan 2005 – Aug 2005. Trained hospital staff on the Sentillion clinical-access system and early computers-on-wheels workflows.

CONVOII — HR Manager / Desktop Support Engineer | Feb 2003 – Jan 2005. Managed HR operations, onboarding, and employee technology in a venture-funded startup.

TELACCESS.COM — IT Manager and Customer Service Manager | Jan 2002 – Feb 2003. Led IT operations and a 20-person service center supporting approximately 3,800 customers at a venture-funded internet service provider (ISP) startup. Integrated ten acquired ISP operations without interrupting customer service.

SMARTFORCE — Systems and Network Engineer | Jan 2000 – Jan 2002. Supported 300 employees and executives and maintained desktops, servers, routers, VPN, and network services.

EDUCATION

MBA, Entrepreneurship — Notre Dame de Namur University, Belmont, CA

BA, Social Science — University of New Orleans, New Orleans, LA

CURRENT CERTIFICATIONS

HDI Certified Support Center Director (HDI, 2021) | Certified ScrumMaster (Scrum Alliance, 2014) | Certified Scrum Product Owner (Scrum Alliance, 2014) | Certified Product Manager (AIPMM, 2019) | AI Product Management (Productside, 2025) | Introduction to Industrial Robotics (A3, 2026) | AI & Law (Lund University, 2026)

PROFESSIONAL DEVELOPMENT

Project Management Academy PMP Exam Preparation — completed; PMP certification not yet earned | Coursera and Udemy project-management coursework — completed | 280 Group Optimal Product Management & Product Marketing — completed 2019 | Mangates Learn Robotics Hands-On Training — completed July 2026 | CSTU x Robofix Hands-On Robotics Bootcamp — completed August 2026 | Launch Technology Institute / AI Robotics Edu — Advanced Robotics Training — in progress
