TECHNOLOGY & SERVICE OPERATIONS LEADER

Senior Technical Program Manager | Rollouts & Deployments | M&A IT Integration | AI Automation

SUMMARY

I work in enterprise companies and in startups, moving the needle on rollouts, deployments, and merger and acquisition (M&A) integrations.

I lead the people and the programs that get technology past the vision or pilot stage.

At Walmart Global Tech I led a 45-person, five-team organization on a \$14 million budget. I grew the managed Mac fleet from about 1,000 devices to 37,000. I led nine enterprise M&A technology integrations against fixed business dates.

I work between the engineers, the security teams and the business, so the people who use the technology get something that just works. I am adding robotics and physical artificial intelligence (AI) to what I do, because that is where my research says the technology is heading next. I stay with a program through delivery and closeout, and I am glad to take on wherever the company's vision goes next.

CORE SKILLS

Technical Program Management | Program & Portfolio Management | Digital Workplace | Endpoint Management | Technology & Service Operations | Rollouts & Enterprise Deployment | Hardware Refresh | M&A IT Integration | Requirements, Roadmaps & Integrated Scheduling | Dependency, Risk & Change Management | Budget & Vendor Management | Cross-Functional & People Leadership | AI Automation | Agile · Scrum · Kanban · Predictive/Waterfall | Executive Communication

PROFESSIONAL EXPERIENCE

INDEPENDENT TECHNICAL PROGRAM MANAGER & AI AUTOMATION CONSULTANT

Menlo Park, CA | April 2026 – Present

KYODO PARTNERS | *Technical Program & AI Automation Consultant, Part-Time Project* | Remote | April 2026 – June 2026

- Supported the founders of a self-funded, fully remote, early-stage real-estate and digital-products venture.
- Translated house-flipping, landlord, and rental-property workflows into requirements for cloud-based calculators, digital products, and automation concepts.
- Helped establish a cloud-first, software-as-a-service (SaaS) enabled operating stack using Google Workspace, Microsoft 365, Cloudflare Access, DigitalOcean and GitHub.
- Used prompt engineering and AI-assisted tools to create requirements, wireframes, workflow prototypes, and a lightweight program portal; documented the environment and transitioned continuing technical ownership to the venture's technology lead.

TECHNOLOGY PROGRAM MANAGEMENT PORTFOLIO | Independent | Menlo Park, CA | April 2026 – Present

- Built a public Technology Program Management Portfolio of simulated operational scenarios based on hypothetical frameworks, covering merger and acquisition (M&A) IT integration, enterprise hardware refresh, and robotics deployment, with Agile, Scrum, Kanban, Hybrid, and Predictive/Waterfall playbooks, command-center dashboards and MuJoCo demonstrations. This robotics work is training- and portfolio-based, not paid employment or professional robotics experience.

MERCOR | AI Trainer, IT Management Subject-Matter Expert, Project-Based | Remote | December 2025 – January 2026 and May 2026

- Trained and evaluated large language models on information technology (IT) management scenarios for a confidential research client, contributing as a subject-matter expert across two separate project engagements.
- Authored gold-standard reference responses — the correct expert answer a model is trained toward — covering diagnosis, escalation logic, proposed solutions and operational feasibility, then graded model output against them and flagged recommendations that would not hold up in a real technology-operations environment. Client identity and training content are covered by a non-disclosure agreement.

WALMART GLOBAL TECH | Senior Manager III, Associate Digital Experience | Sunnyvale, CA | May 2012 – August 2025

End-user computing, service operations, and technology program delivery; people leader and program owner for a five-team portfolio.

- Created and led Mac@Walmart, the Device as a Choice program, scaling the managed environment from approximately 1,000 to 37,000 devices, and supported Modern Management and telemetry strategy affecting approximately 300,000 additional Windows endpoints, sustaining 98% operating system compliance year over year.
- Took the Mac from a special-order exception to a standard choice any associate could make; at departure about 70% of the e-commerce organization and about 60% of executives were on Mac.
- Built the total cost of ownership (TCO) model that made the business case for modern endpoint management, working with Finance on the cost inputs, and evangelized the findings across the organization.
- Deployed Infinipoint across roughly 30,000 Macs, reaching about 93% remediation within three days.
- Led nine enterprise merger and acquisition (M&A) technology integrations against fixed business dates, coordinating endpoint standards, identity and access, Day 1 onboarding, and collaboration and workspace migrations. The resulting playbooks supported Walmart's permanent integration team.
- Led the engineering and pilot deployment for 200 Walmart Academies, covering Mac mini caching servers, iPads and Pico virtual reality (VR) headsets, then handed the standardized rollout to a third-party integrator.
- Led a 45-person, five-team technology portfolio across endpoint engineering, Level 2 support, call-center support, remote-support tools, and endpoint telemetry, with 20 direct reports including managers. Coached people managers, engineers, product managers, project managers, developers, and data contributors.

- Managed a \$14 million annual portfolio and delivered \$2 million in annual savings and cost avoidance, including \$451,000 through the Jamf cloud agreement and \$120,000 through remote-support improvements. Drove approximately \$1.7 million in Log4j cost avoidance. Owned and negotiated the worldwide vendor agreements behind global IT purchasing, including Apple, Jamf, Infinipoint, BeyondTrust, Druva, and Code42.
- Invented, owned, and led the vision and product for Sammy, an AI-enabled self-service and diagnostics experience that cut IT ticket volume by about 40%. Managed the product roadmap and backlog in Aha!
- Introduced Google's Happiness Tracking Survey (HaTS) at Walmart, turning an instrument built for external customers toward internal employees, and implementing it first in my own organization. Used telemetry, support data, HaTS, and Net Promoter Score (NPS) feedback to prioritize roadmaps and backlogs. Sustained 96% Mac satisfaction for six years and improved Mac NPS from 70 to 85.
- Led the Level 2 escalation organization, the largest of the five teams at 22 people, supporting Windows and macOS endpoint technology across Walmart stores, pharmacies, Academies, and distribution centers.
- Authored the endpoint hardware and operating system policies, standards, and guidelines, and served as the designated subject-matter expert to the Security Council. Partnered with Security on endpoint visibility, vulnerability remediation, browser governance, Microsoft Defender, Tanium, Infinipoint, and incident response.

WALMART | Manager, E-Commerce Support Engineering & Help Desk | Sunnyvale, CA | May 2007 – May 2012

- Rebuilt and led a 20-person support-engineering organization and established offshore support coverage in India and China, running follow-the-sun delivery with Cognizant and Bleum.
- Led technology support for employees, executives, engineering teams, and as many as 15,000 customer-service agents during peak periods with a four-person help desk, plus an e-commerce help desk handling approximately 30,000 accounts annually.
- Led the Remedy-to-ServiceNow pilot and standardized ticketing, inventory, support, and escalation workflows; the e-commerce instance was later absorbed into the Walmart Stores instance and used as its blueprint.
- Directed procurement, inventory, shipping, deployment, budgets, and chargebacks for employee technology, and owned the Dell vendor relationship for the e-commerce organization. Recovered approximately \$400,000 by reducing the Cisco telephone footprint and reselling surplus equipment.
- Created the Walmart eCommerce Management Resource Center (WeMRC), an onboarding framework connecting HR, hiring managers, IT, and Security around equipment, access, and day-one readiness. Served as the WeMRC subject-matter expert on the team that migrated it into Workday when Walmart adopted the platform enterprise-wide.
- Partnered with Security to remediate more than 17,000 Linux vulnerabilities using open-source tools without new software spending.

EARLIER EXPERIENCE

BAE SYSTEMS — Lead Desktop Support Engineer | San Jose, CA | Aug 2005 – May 2007. Tier 3 Mac, Windows, and Linux support in a defense environment.

UCSF MEDICAL CENTER via TEKSYSTEMS — Technical Trainer | San Francisco, CA | Jan 2005 – Aug 2005. Trained hospital staff on the Sentillion clinical-access system.

CONVOII — HR Manager / Desktop Support Engineer | San Mateo, CA | Feb 2003 – Jan 2005. Managed HR operations, onboarding, and employee technology in a venture-funded startup.

TELACCESS.COM — IT Manager and Customer Service Manager | Burlingame, CA | Jan 2002 – Feb 2003. Led IT operations and a 20-person service center supporting approximately 3,800 customers at a venture-funded internet service provider (ISP) startup. Integrated ten acquired ISP operations without interrupting customer service.

SMARTFORCE — Systems and Network Engineer | Redwood City, CA | Jan 2000 – Jan 2002. Supported 300 employees and executives across desktops, servers, routers, VPN and network services.

EDUCATION

MBA, Entrepreneurship — Notre Dame de Namur University, Belmont, CA

BA, Social Science — University of New Orleans, New Orleans, LA

CURRENT CERTIFICATIONS

HDI Certified Support Center Director (HDI, 2021) | Certified ScrumMaster (Scrum Alliance, 2014) | Certified Scrum Product Owner (Scrum Alliance, 2014) | Six Sigma Yellow Belt (6sigmastudy, 2026) | Certified Product Manager (AIPMM, 2019) | AI Product Management (Productside, 2025) | Introduction to Industrial Robotics (A3, 2026) | AI & Law (Lund University, 2026)

PROFESSIONAL DEVELOPMENT

Project Management Academy PMP Exam Preparation — completed; PMP certification not yet earned | 280 Group Optimal Product Management & Product Marketing — completed 2019 | Mangates Learn Robotics Hands-On Training — completed July 2026 | CSTU x Robofix Hands-On Robotics Bootcamp — completed August 2026 | Universal Robots Academy e-learning including risk assessment | Launch Technology Institute / AI Robotics Edu — Advanced Robotics Training — in progress
